Preview the ADL H118 Headphones and Audition New iHP-35 Headphone Cables***

10/9/2012 • ADL – Alpha Design Labs – creates innovative, smart-looking components with scintillating sound for computer-based systems as well as personal and portable electronics. ADL aims high using only the best materials and designs for an expanding line of products that now include the superb H118 Headphones and iHP-35 Headphone Cables in five versions for the perfect connection!

It's All In Your Head!

What could possibly be more intimate than listening to music through headphones? ADL engineers are currently working on an answer to that but so far no word! It's just you and the sound in your head.

Headphones are in intimate sonic and physical contact with the listener and reveal problems in the audio chain or the headphones themselves.

Too many headphones have too much bass, or they're too bright with a thick, congealed midrange. Some are just too uncomfortable to wear for too long.

The ADL H118 sound is balanced in a completely audiophile way. Scintillating tonal colors and textures, intimate and close harmonic interplay, the sense of space, the resonance of music itself creates an involving emotional experience... you'll feel THIS CLOSE to the music!

iHP-35 Headphone Cables

High-quality headphones are a must in the age of personal, portable electronics, but many are supplied with inferior throw-away cables. If your music is important to you so is great sound, and ADL's iHP-35 cables sound spectacular with headphones, players and headphone amplifiers... especially ADL's Cruise and Stride headphone amps! The iHP-35 series is available in five versions to make the perfect connection!

The iHP-35s feature silver-plated α (Alpha) OCC conductors treated with Furutech's α (Alpha) Process consisting of deep cryogenics and demagnetization. The connectors on these high-quality headphone cables are rhodium-plated 3.5mm stereo-to-3.5mm stereo with a rhodium-plated copper alloy pin. The body gets the same attention; its nonmagnetic stainless steel and the iHP-35s achieve high noise isolation in their RoHS-compliant sheath. Results are outstanding; the wideband colorful and engaging sound that audiophiles and music lovers crave.

Preview the H118 headphones and new headphone cables at CANJAM, everyone behind you will get steamed... you won't want to put them down!

iHP-35
3.5mm-to-3.5mm
